TITLE:	Using the Hunter16 and Hunter 16/80 Y2K TSR
ABSTRACT:	How to install and use the Hunter 16 Year 2000 TSR

Background

The question of year 2000 compliance is of particular importance to the IT industry. Investigations at Husky revealed that the Hunter 16 and Hunter 16/80 were not year 2000 compliant. Having identified the problem Husky then had to decide upon a course of action. It was decided that there were two valid approaches.

1. It is not always practical to return units for upgrading. This is a costly process and for users with large numbers of computers, therefore an alternative would probably be required. With this in mind a free issue TSR was developed and tested.

2. A more permanent solution would be required by many users and therefore the amendments applied in the TSR were included in a new BIOS release for the Hunter 16. However, given the relatively small number of Hunter 16/80's in the field it was decided that the Hunter 16/80 BIOS would not be upgraded.

Installing and Using the TSR

The TSR is very simple to use and its operation is transparent to the application, therefore there is no need to amend any application software. Once loaded onto the computer the TSR can be invoked by typing 'H16CENT' and pressing 'enter'. This will invoke the TSR and any software that is subsequently invoked will be able to retrieve the correct date information.

Running the TSR from the DOS prompt is not a very practical solution as it will not be automatically invoked if the computer is rebooted. It is recommended that a line be added to the AUTOEXEC.BAT file to invoke the TSR.
